

# Enterisol® Ileitis

# Enterisol® Ileitis FF

*Lawsonia Intracellularis* Vaccine, Avirulent Live Culture

## Description

Enterisol® Ileitis is a safe, effective, convenient, one dose, live *Lawsonia intracellularis* (ileitis) vaccine. It is administered orally.

## Features

- Safe for pigs 3 weeks of age or older.
- Single dose administration.
- Easy to use, oral administration via the drinking water.
- Can be administered via oral drench.
- Avirulent live culture vaccine.

## Benefits

- Significantly reduces gross and microscopic intestinal lesions of ileitis.
- Significantly reduces colonization by *Lawsonia intracellularis* following challenge with virulent microorganism.

## Advantages

- Orally administered, modified-live ileitis vaccine.
- Convenient water delivery results in less animal stress.
- Simple oral vaccination reduces the need for injections.
- Less exposure to needles results in improved pork quality and worker safety.

## Dosage & Administration

Administer one dose via drinking water or oral drench to each pig.

**Lyophilized Form** – Rehydrate the vaccine by adding the full contents of the accompanying sterile diluent to the vaccine. Shake well and use entire contents immediately. The Lyophilized form may be administered via oral drench or water.

**Frozen Form (FF)** – Thaw vaccine under trickling cool water bath until liquid (usually 30-40 minutes). Shake well and use entire contents immediately.

See product insert for complete directions.

## Precautions

**Lyophilized Form** – Store at 35°– 46°F. Do not freeze. Use entire contents immediately after reconstituting.

**Frozen Form** – Store frozen at ≤ -70°C. Do not thaw until immediately prior to use.

Use entire contents immediately after thawing. Do not refreeze.

In case of anaphylactoid reaction, epinephrine is symptomatic treatment.

## Highlights

- Avirulent live culture vaccine
- Drinking water administration
- Oral drench administration capability
- Less animal stress during vaccination
- PQA friendly - no needles

## Uses

Enterisol® Ileitis is recommended for the vaccination of healthy, susceptible swine 3 weeks of age or older as an aid in the prevention and control of porcine proliferative enteropathy (Ileitis) caused by *Lawsonia intracellularis*.

Can be used in conjunction with Reload Pack®.

## Warning

For veterinary use only.

Do not vaccinate within 21 days of slaughter.

This product has not been tested in pregnant animals.

Do not use concurrently with antibiotics.

## Product Information

Name	Code	Size
ENTERISOL ILEITIS	137724	100mL 50 dose
