

# 3FLEX®

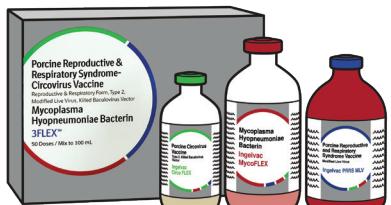

## VACCINE MIXING GUIDE

### GUÍA PARA EL MEZCLADO DE VACUNA

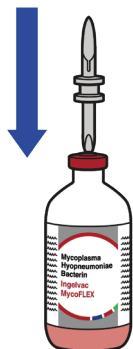

#### Directions for proper mixing of 3FLEX for the customized control of PCV2, Mhp and PRRS.

Direcciones para el mezclado adecuado de 3FLEX como parte del control personalizado de PCV2, Mhp y PRRS.

**STEP 1:**  
Every 3FLEX® package contains one bottle of each Ingelvac CircoFLEX® 1, Ingelvac MycoFLEX® 2 in a headspace bottle (HSB), and lyophilized Ingelvac PRRS® MLV 3.

Cada paquete de 3FLEX® contiene una botella de Ingelvac CircoFLEX® 1, una botella con espacio sobrante (HSB) de Ingelvac MycoFLEX® 2 y una botella de Ingelvac PRRS® MLV 3 liofilizado.

**STEP 2:**  
Insert vented transfer needle into Ingelvac MycoFLEX® 2 headspace bottle.  
*Insertar la aguja de transferencia en la botella con espacio sobrante de Ingelvac MycoFLEX® 2.*

**STEP 3:**  
Invert the Ingelvac CircoFLEX® 1 bottle over the Ingelvac MycoFLEX® 2. Transfer the full contents of the vaccine into the Ingelvac MycoFLEX® 2 bottle via the vented transfer spike and gently shake. Then remove the Ingelvac CircoFLEX® 1 bottle.

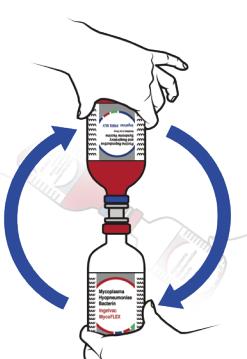

**STEP 4:**  
Invert the Ingelvac PRRS® MLV 3 bottle over the Ingelvac MycoFLEX® 2 and slowly insert the vented transfer spike into the Ingelvac PRRS® MLV 3 vaccine bottle, releasing the vacuum.

*Invertir la botella de Ingelvac PRRS® MLV 3 e insertar la misma en la aguja de transferencia que conecta con la botella de Ingelvac MycoFLEX® 2 liberando el vacío.*

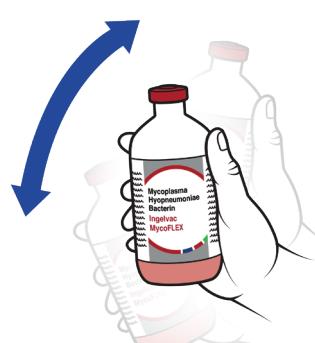

**STEP 5:**  
While still connected by transfer spike, rotate the vials of Ingelvac MycoFLEX® 2 and Ingelvac PRRS® MLV 3 so that Ingelvac MycoFLEX® 2 is on top. Transfer a portion of the mixed vaccine from the Ingelvac MycoFLEX® 2 bottle into the Ingelvac PRRS® MLV 3 bottle. The amount transferred needs to be enough to rehydrate the Ingelvac PRRS® MLV 3 product.

*Estando aun conectados por la aguja de transferencia, rotar las botellas de Ingelvac MycoFLEX® 2 e Ingelvac PRRS® MLV 3 de forma que Ingelvac MycoFLEX® 2 quede arriba. Transfiera una porción de la vacuna mezclada, la cantidad transferida tiene que ser suficiente para rehidratar el producto Ingelvac PRRS® MLV 3.*

**STEP 6:**  
With the transfer spike still intact, flip the Ingelvac PRRS® MLV 3 and Ingelvac MycoFLEX® 2 bottles so all product transfers into the Ingelvac MycoFLEX® 2 bottle.

*Con la aguja de transferencia intacta, voltear las botellas de Ingelvac PRRS® MLV 3 e Ingelvac MycoFLEX® 2 para que todo el contenido se transfiera adentro de la botella de Ingelvac MycoFLEX® 2.*

**STEP 7:**  
Shake well and use immediately.  
*Agitar bien y utilizar de inmediato.*

**STEP 8:**  
Administer 2 mL dose intramuscularly (in the neck per PQA Plus guidelines).  
*Administrar intramusalcularmente una dosis de 2mL (en la tabla del cuello siguiendo las directrices de la guía PQA Plus).*
