

Ingelvac PRRS® MLV

PRRS Vaccine

Description

Ingelvac PRRS® MLV is a modified-live PRRS vaccine that is proven safe in pigs as well as gilts and sows at any stage of production in PRRS positive herds. It provides cross protection against heterologous challenge; (including Lelystad virus) and has shown to significantly reduce reproductive failure and respiratory disease due to PRRS virus.^{1,2}

Features

- Safe in pigs, gilts and sows at any stage of production.
- Aids in the prevention of respiratory disease and aids in the reduction of reproductive disease caused by PRRS virus.
- Proven cross protection against heterologous challenge; (including Lelystad virus).
- Easy to use, cost effective and field proven against respiratory and reproductive forms of PRRS Virus.
- Convenience of 10, 50 and 250 dose presentations.

Benefits

- Long-lasting immunity. Duration of immunity is at least 4 months.
- Whole herd or population based PRRS control program advantages.
- Significantly reduces reproductive failure due to PRRS virus.
- Gilt stabilization/acclimatization program advantages.

Dosage & Administration

Ingelvac PRRS® MLV utilizes the same intramuscular (IM) dose size (2 mL) for pigs, adult breeding-age or pregnant females.

Pigs, gilts and sows: Ingelvac PRRS® MLV is recommended for use in healthy susceptible swine in PRRS virus-positive herds according to label direction. Using aseptic technique, administer a single 2 mL dose intramuscularly (IM) for the respiratory and reproductive form of the disease. The duration of immunity is throughout the finishing or gestation period, or at least 4 months post-vaccination.

The vaccine can be used at any stage of production. Revaccination of the whole herd can occur every 3-4 months or as directed by your veterinarian.

DO NOT VACCINATE BOARS.

Precautions

For veterinary use only; for use only in swine as directed.

Vaccinated pigs, sows or gilts are not to be harvested for human consumption before 21 days post-vaccination.

See label insert for complete information.

Highlights

- Aids in the prevention of respiratory disease in growing pigs
- Demonstrated cross protection against heterologous challenge (including Lelystad virus).
- Safe and efficacious for use at any stage of production.
- NEW 250 dose presentation to save on time and labor during administration.

Uses

- Whole herd or population based PRRS control programs.
- Replacement gilt immunization and preparation.
- Reproductive maintenance vaccination program in sows.
- Administration in growing pigs to aid in prevention of respiratory disease

Warning

Do not vaccinate boars.

Anaphylactoid reactions may occur.

Antidote: administer epinephrine.

Vaccinated pigs, sows or gilts are not to be harvested for human consumption before 21 days post-vaccination. Ingelvac PRRS® MLV is not recommended for use in PRRS negative (naïve) herds.
