**Indications:** For vaccination of healthy dairy or beef cattle seven months of age or older as an aid in the prevention of pneumonic pasteurellosis by stimulating immunity to *Pasteurella multocida*, and as an aid in the reduction of respiratory disease due to *Mannheimia haemolytica*.

**Dosage and Administration:** Inject one 2 mL dose intramuscularly, using aseptic technique. Although only a single dose is necessary to confer active immunity, a booster dose is recommended whenever subsequent stress is likely. Healthy cattle should be vaccinated a minimum of 21 days prior to shipping or exposure to stress which may precipitate infectious conditions.

**Pasteurella  
Multocida Bacterial  
Extract-  
Mannheimia  
Haemolytica Toxoid**  
**Prespense® HM**

10 Doses/20 mL

**Precautions:** Store in the dark at 35-45°F (2-7°C). Do not freeze. Shake well before using. Use entire contents when first opened. Do not vaccinate within 21 days before slaughter. Transient injection site reactions may occur in a small percentage of vaccinates. In case of anaphylactoid reaction, administer epinephrine.

**Preservative:** Thimerosal.
