Indications: For vaccination of healthy dairy or beef cattle three months of age or older as an aid in the reduction of severity of pneumonic pasteurellosis by stimulating immunity to *Mannheimia haemolytica*.
Dosage and Administration: Inject one 2 mL dose subcutaneously in the neck area, anterior to the shoulder, using aseptic technique. Healthy cattle should be vaccinated a minimum of 14 days prior to shipping or exposure to stress which may precipitate infectious conditions. Although only a single dose is necessary to confer active immunity, a booster dose is recommended whenever subsequent stress is likely.

**Mannheimia
Haemolytica
Toxoid**
Presponse® SQ

10 Doses/20 mL

Precautions: Store in the dark at 35-45°F (2-7°C). Do not freeze. Shake well before using. Use entire contents when first opened. Do not vaccinate within 21 days before slaughter. In case of an anaphylactoid reaction, administer epinephrine. Caution: Do not use as diluent for live vaccines.

Preservative: Thimerosal.
